

Course Outline

Annual International Training Course

1. Course Title:

Oral Health Care in Primary Care Settings

2. Duration:

2 weeks (April 21-May 2, 2025)

3. Background:

Thailand International Cooperation Agency (TICA)

TICA is a national focal point for Thailand's international development cooperation. It was established in 2004 to realize Thailand's aspiration to be a contributor to international development cooperation. Believing that global challenges are best addressed through international cooperation and global partnership, TICA continues to work closely together with its development partners to realize the global development agenda through various capacity-building and human resources development programmes. In response to the recent changes in the global landscape of development cooperation, TICA has strengthened its partnerships to harness the synergy of South-South and Triangular Cooperation to tackle global development challenges, including expediting the implementation of Sustainable Development Goals (SDGs). It also continues to realign our focuses in order to deliver Thailand's commitments as a global reliable partner.

Since 1991, TICA, in collaboration with educational institutions in Thailand, has offered short-term training courses under its Annual International Training Course (AITC) programme. The number of courses offered each year varies between 25 to 35 courses for 20-35 participants per course. AITC not only fosters good and friendly relations which Thailand has already enjoyed with recipient countries across regions, but also helps Thailand to reach out to those countries with

which we desire to engage more closely. The courses offered by TICA in 2023-2025 are categorized into 5 themes: Sufficiency Economy Philosophy (SEP), food security, climate change and environmental issues, public health, BCG Model related.

Oral health care in a primary care setting

The primary care setting is seen as the first point of contact in the health care system. Oral health is considered an integral part of general health. Dental personnel work in an important role in a primary care setting. In Thailand, the integration of dental care into primary health care services has been advocated for many years. Currently, the concept of a people-centered approach has been used as the core concept for strategies for implementing an integration of oral health care into primary care services.

The section of Community Dentistry, Department of Family and Community Dentistry has been worked by using a people-centered approach in many courses of the Dentistry curriculum. Moreover, the multi-professional care team is the core concept, also. It is, therefore, this training course will provide dental personnel with the knowledge and skill necessary, to build up the capacity in developing the integration of oral health care in a primary care setting based on the concept of teamwork and a people-centered approach.

Organization/Institution

Faculty of Dentistry, Chiang Mai University

4. Objectives:

The program is designed to:

- 4.1 Understand the oral health care system
