# LEED Gold

With LEED Gold certification Version 4 mounted on the wall, MedPark Hospital joins the elite of international hospitals rigorously checked-up for sustainable building design – and that’s not just good for the planet; it’s best for medical practitioner performance and patient treatment outcomes.

A Double Door to prevent infectious agents from spreading out when entering or leaving the room

# HOSPITAL FACILITIES & MEDICAL EQUIPMENTS

We have **205**  
registered beds

**65** ICU beds

**8** NICU beds

**132** normal  
IPD beds

## Intensive Care Unit (ICU) - Dedicated Nurse Station

- Nursing station in front of ICU room
- 1:1 nurse to patient ratio in ICU
- Hybrid ICU – convertible to Hemodialysis room
- Provide in-room toilets for patients who can still move around

## Hemodialysis Unit (Private Beds - 20 Units)

- Park & Treat directly to Hemodialysis Center
- Specialized air - ventilation system to filter out microorganisms and PM 2.5
- Ultrapure water; same purify grade as intravenous fluid for dialysis

## Cardiology Center - Designed by Cardiologists

State-of-the-Art Bi-Plane Angiogram enables physicians to see the blood vessels. The center has also installed a special X-ray machine inside its hybrid operating theaters to enable doctors to perform surgery with greater accuracy and convenience

## Hybrid Operating Theatre

Hybrid operating room is equipped with advanced medical imaging devices which enable minimally invasive surgery

Surgeons can finish different procedures in one room- interchangeable between cardiac catheterization room and the heart surgery room during operation

## Radiotherapy

This is a one-stop service at MedPark Hospital. We are among less than 10 private hospitals with this advanced technology. It is located on the Floor B2 as it is designed to the highest safety standards with parts of the concrete walls 2.5 meters thick to prevent radiation leakage.

Park and treat service for patients is available. Patients at Radiotherapy clinic are fragile hence there is no need to pass through other clinics.

Brachy Rx

CT Simulator:  
Siemens SOMATOM Confidence

ELEKTA Versa & ELEKTA Infinity

## Laboratory (ISO 15189, 15190)

- First of Siemens fully automated lab system in Southeast Asia
- Rapid diagnostic Covid test that also enables identifying the presence of bacterial or fungal infections so that physician can do the treatment promptly
- Frozen Sectioning: Tissue is transferred to the frozen section lab directly from the operating room. Pathologist can perform rapid macroscopic and microscopic analysis. After reviewing the sample, the pathologist conveys the test results to the surgeon in the operating room. Immediately, surgeon can adjust the operation accordingly and avoid unnecessary re-operations.

## Rehabilitation

Sky Garden

Hydrotherapy

- Sky rehabilitation garden paved with different surface textures ( sand, rocks, grass) for patients to practice walking, train their tactile sensory perception and their balance.
- Plants in the garden are carefully selected. There are herbs and trees that are common for elderly to trigger their memories and stimulate their resemblance.
- Hydrotherapy provides buoyancy support to reduce the risk of injuries.
- Hybrid assistive limb robot for stroke patients. It picks up the patients' small electrical signals from the brain or spinal cord and transforms those signals into movements that patients intend to perform.

## Simulation Center

Simulation Center provides realistic training for healthcare personnel to learn and hone their skills.

Participants can train in an environment that is psychologically safe and zero physical risk.

## Inpatient Rooms : Executive Lake / River View
