

PARTNERSHIP and TECHNICAL COOPERATION Thailand

is determined to encourage
both national and international partnerships
on technical cooperation development at all levels,
leading towards the constructive role of Thailand
to achieve the Sustainable Development Goals (SDGs).

Our strong determination to realise such goals has been clearly reflected by several activities from the past to present:

Supporting the IMO on technical cooperation such as fraudulent ship registration, domestic ferry safety, and the development of port regulatory framework

Hosting IMO Technical Cooperation Programs (ITCP) and initiating projects to enhance the capability to implement international maritime standards in accordance with the IMO's global mandates

Improving the quality of education in the field of maritime transport by providing fellowships, training equipment, learning materials, and participating in international projects to enhance cooperation and partnership with the IMO and its member states while maintaining our contribution to the IMO's Integrated Technical Cooperation Programme (ITCP)

Collaborating with the IMO and other UN agencies such as the UN Economic and Social Commission for Asia and the Pacific (ESCAP) in realising maritime-related SDGs
