★ Young entrepreneurs key force for city development

A dialogue focusing on the role young entrepreneurs playing in city's development sparked discussions among young entrepreneurs from home and abroad in Zibo city, Shandong province, on Saturday.

The G20 Young Entrepreneurs Dialogue welcomed more than 30 young talents and entrepreneurs from 13 countries to explore the mission of young entrepreneurs in city development and also what city's development will mean for young entrepreneurs.

Shahbaz Khan, director of UNESCO Office Beijing, said in a video that the youth are the center of the United Nations 2030 Agenda for Sustainable Development.

"Sustainable development and peace cannot be achieved unless we engage with young people around the world to create conditions for them to reach and unleash their full potential," he said, adding that UNESCO places much emphasis on engagement of youth in building cities that are creative, sustainable and resilient.

The role of a city is to provide the best possible environment for the development of future entrepreneurs, said 27-year-old Vittoria Pesenti, general manager of Swiss Chinese Chamber of Commerce.

She added that the duty of young entrepreneurs is to initiate technological intervention that helps the city to undergo social technological transition and become smart cities.

Young people are becoming new engines for driving city's economic and innovation development, said Li Rong, deputy director of the Foreign Affairs Office of Shandong Provincial People's Government.

Li hoped that young entrepreneurs around the world will through the dialogue seize new opportunities of Shandong's opening to the outside world, actively promote trade cooperation and promote in-depth industrial integration.

Zibo, a city featured with industrial power, has paid much attention in attracting young talents to join in the city's innovation-driven, high-quality development.

In the past five years, the city has introduced more than 1,300 foreign talents to the city, and implemented 410 projects at national, provincial and municipal levels, according to Li Junjie, vice-mayor of Zibo.

Attendees for the conference also participated in a tour from Aug 12 to 14, visiting cultural spots and industrial zones in Jinan, capital city of Shandong and Zibo, which provided a platform to better learn about Shandong and China.

CHEERS!

THIRD ZIBO-TSINGTAO BEER FESTIVAL KICKS OFF

The 3rd Zibo-Tsingtao Beer Festival aims to create a great environment mixed with flowing beer, tasty cuisines, technology, and leisure and arts. The festival's grand opening ceremony kicked off in Zibo, which is located in East China's Shandong province, on Aug 19.

With light shows, cultural performances and music shows entertaining revelers at the Zibo International Exhibition Center, the main venue of the festival, Zibo locals are able to enjoy beer and delicacies with their friends until Aug 28.

A variety of entertaining events showcasing local cultures will be held during the course of the 10-day carnival, including parades, night markets, and performances.

The 10-day carnival offers a large selection of delectable meals in addition to beer. More than 50 well-known food businesses have set up food stalls at the event.

It is important to note that this festival has prioritized Zibo-specific food companies to sell food at the festival, allowing locals to experience all of Zibo's flavors in one location.

Zibo makes big plans for hydrogen sector

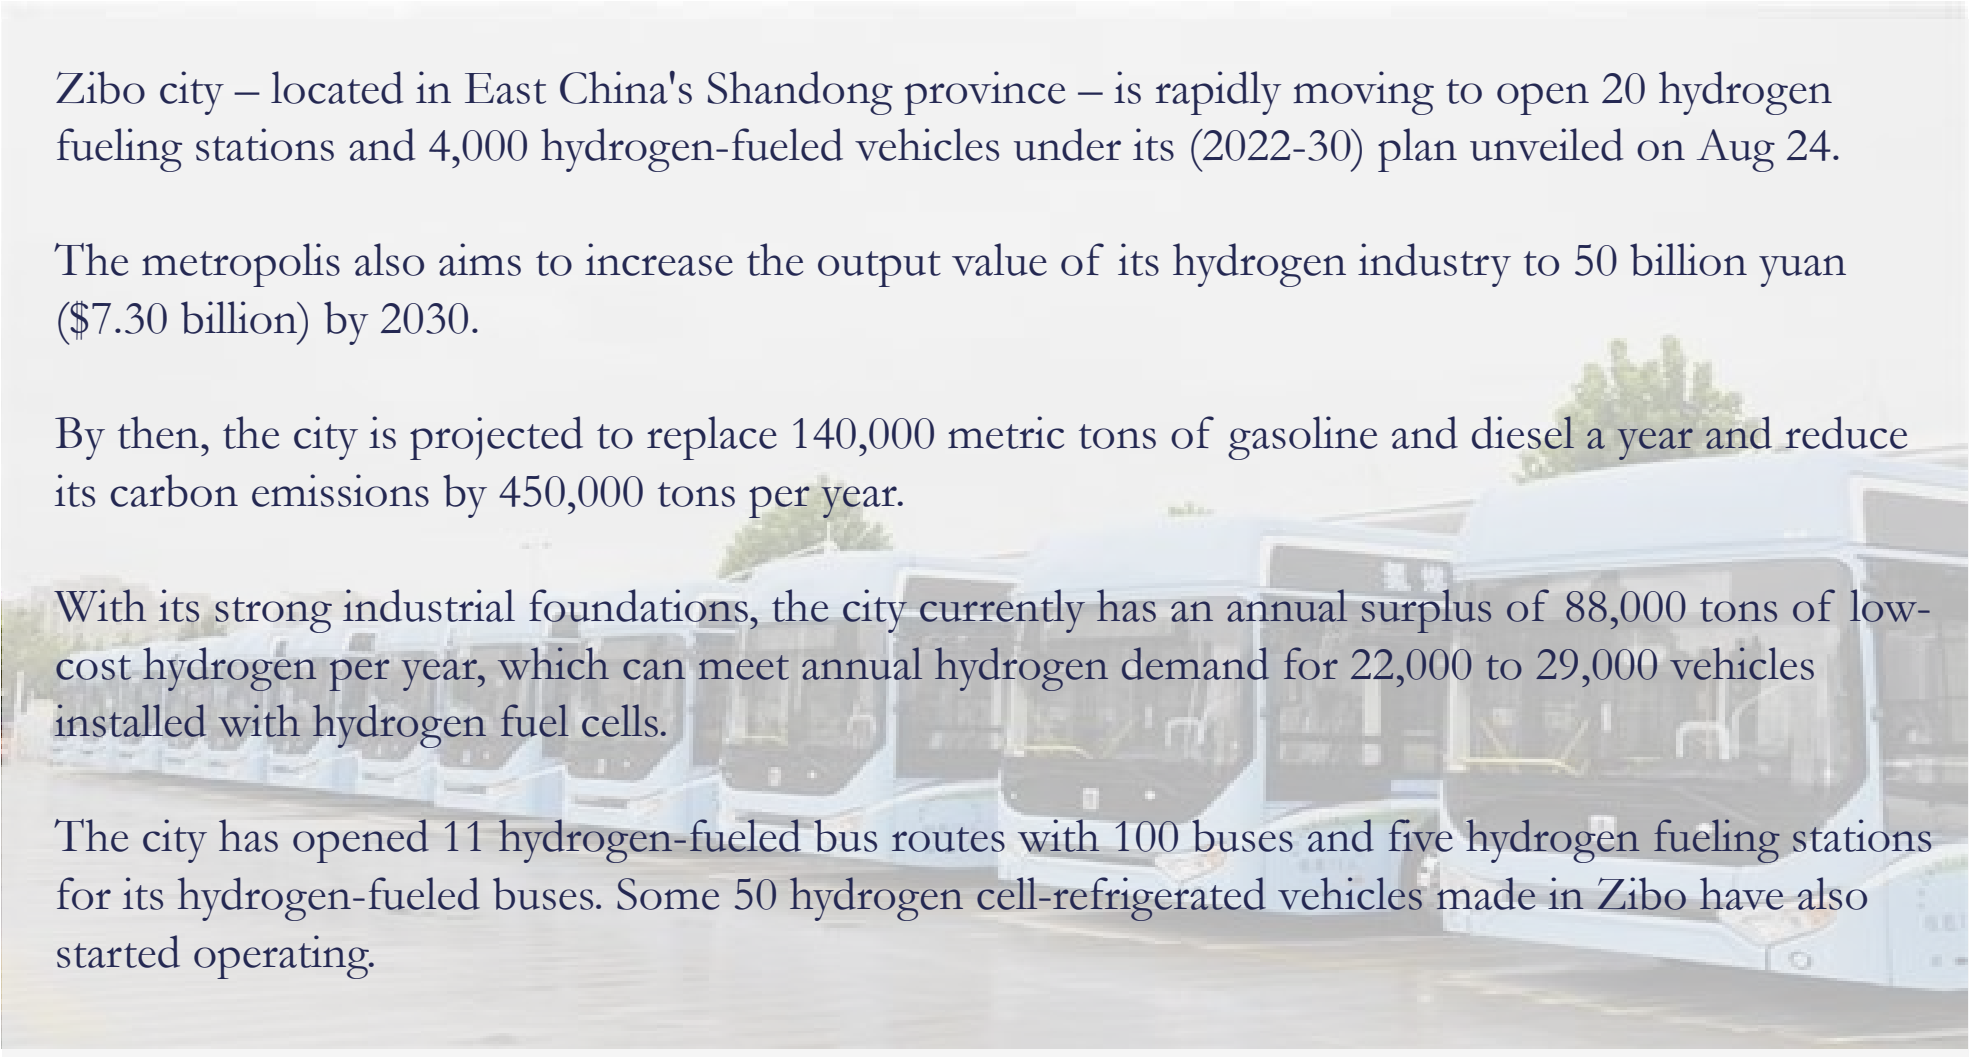

Zibo city – located in East China's Shandong province – is rapidly moving to open 20 hydrogen fueling stations and 4,000 hydrogen-fueled vehicles under its (2022-30) plan unveiled on Aug 24.

The metropolis also aims to increase the output value of its hydrogen industry to 50 billion yuan (\$7.30 billion) by 2030.

By then, the city is projected to replace 140,000 metric tons of gasoline and diesel a year and reduce its carbon emissions by 450,000 tons per year.

With its strong industrial foundations, the city currently has an annual surplus of 88,000 tons of low-cost hydrogen per year, which can meet annual hydrogen demand for 22,000 to 29,000 vehicles installed with hydrogen fuel cells.

The city has opened 11 hydrogen-fueled bus routes with 100 buses and five hydrogen fueling stations for its hydrogen-fueled buses. Some 50 hydrogen cell-refrigerated vehicles made in Zibo have also started operating.

What's more, over 20 Zibo-based enterprises have established a comprehensive hydrogen cell industry supply chain covering fuel cell membranes, reactors, engines and completed vehicles.

To achieve breakthroughs in the hydrogen energy industry, Zibo plans to guide its industrial resources sector to grow manufacturing clusters and develop corresponding blocks.

Based on existing hydrogen resources, plans are for four industrial bases. These will supply the hydrogen production sector, the hydrogen equipment manufacturing sector, the hydrogen cell commercial vehicles industry and the key materials and core components sector.

Enterprises in these four bases are projected to make major advances. Plans are for them to work with universities to promote new hydrogen production technologies and attract more enterprises that focus on fuel cell vehicles and key components, to manufacture a complete hydrogen cell vehicles supply chain.

Moving forward, plans are for Zibo to leverage its potential in hydrogen production and hydrogen fuel cell production and attract more elements to develop an eco-friendly hydrogen energy industry. ■

Shandong Qidu Pharmaceutical Co., Ltd.

Qidu Pharmaceutical Co., Ltd. is a comprehensive research - oriented pharmaceutical manufacturer, which mainly focuses on syringes, oral preparations and APIs. The company has a professional sales team and a technical support department, which can provide all kinds of medical institutions with all kinds of intravenous drug combination schemes and technical support for intravenous drug allocation. It can also provide high-quality products and outstanding services to patients who need emergency treatment by cooperating closely with medical institutions.

As one of the Top 100 Pharmaceutical Enterprises in China, Qidu has superb public praise and high-quality products in the country, as well as a good reputation within the industry. Its products have been exported to East Asia, South Asia, Southeast Asia, South America, Eastern Europe, Africa and other regions.

Cooperation Demands

Major Countries:

The Federal Democratic Republic of Ethiopia, The Republic of the Philippines, The Republic of Singapore, The Federal Republic of Nigeria, The Republic of Mali, The Republic of Mozambique, The United Republic of Tanzania, The Islamic Republic of Pakistan

Cooperation Methods:

Pharmaceutical import and export trade

Shandong Jibao Electric Co., Ltd.

Established in January 2006, Shandong Jibao Electric Co., Ltd. has two independent research and development institutions: Zibo Jibao Mutual Inductor Research Institute and Zibo Bofeite Electric Power Technology Software Co., Ltd.

The company is a high-tech enterprise integrating scientific research, production and marketing, with a scientific research team integrating production, learning, research and testing. It has complete advanced equipment and perfect detection means required for manufacturing high-voltage electrical appliances and masters the core technology of high-voltage electrical energy measurement. Based on the data-driven online detection technology of energy efficiency of high-voltage energy-consuming equipment, the comprehensive monitoring of its state, information perception and local analysis are realized. By reflecting the change trend of destruction energy in the form of apparent electric quantity, some new technologies such as active detection, monitoring the change process and real time proper disposal were put forward. It has lead the industry development in the field of high-voltage electric energy measurement and made an important contribution to energy conservation, emission reduction and high-quality development.

Cooperation Demands

Major Countries:

Develop the international power market in South America; lead the enterprises in the alliance to create central Asia power equipment market projects.

Cooperation Methods:

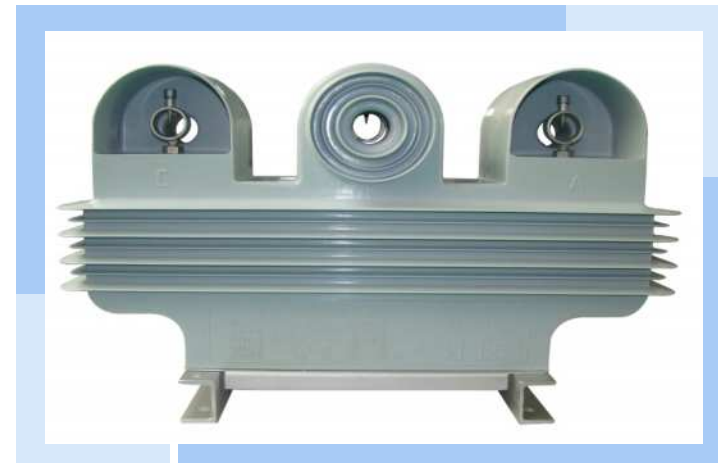

Co-marketing, project cooperation and technology transfer of several high-tech patented products of the company, etc.
