Briefing of Zibo Maternal and Child Health Care Hospital

ZIBO MATERNAL AND CHILD HEALTH CARE HOSPITAL

Zibo Maternal and Child Health Care Hospital (The Third People's Hospital of Zibo, Zibo Women and Children's Hospital) is located in Zhangdian District, Zibo. It was established in 1962. The hospital was approved as a 3-A-Class maternal and child health care specialized hospital integrating medical treatment, health care, teaching, scientific research, prevention and rehabilitation. The hospital has 1000 beds, 1616 employees. The New Campus covers an area of 183,100 square meters. The Xingyuan Campus covers an area of 41,000 square meters. The annual outpatient volume of the hospital is more than 1.1 million. 37,000 patients were discharged from hospitals. The highest number of births per year is nearly 10,000.

The New Campus

The Xingyuan Campus

PICU

The Perinatal Health Care Center has been selected as Shandong Provincial Key Discipline. The Maternal Health Department has been selected as Shandong Provincial Health Care Specialty. Pediatrics, Neonatology, Gynecology, Reproductive Health and Infertility, Oncology, Ultrasound have been selected as Zibo Municipal Key Discipline.

Looking into future, the hospital sincerely hopes to establish communication, cooperation, exchange visits with foreign friendly hospitals. In order to bring a bright future to maternal and child health care, promote medical progress together.

Part two

**The Characteristic Departments of Zibo
Maternal and Child Health Care Hospital**

Obstetrics Department

THE ADVANTAGES

At present, our hospital has specification to develop gestational diabetes screening, diagnosis, treatment, and a series of interventions. We have opened the One - day clinic for gestational diabetes for the first time in our city. The annual number of outpatient visits reached **120,000**, and the positive rate of gestational diabetes screening can reach 16.6%. The annual number of delivery volume is nearly **10,000** cases, and the number of deliveries ranks first in the city.

At present, the subspecialty of perinatal nutrition and metabolic diseases in our department has been relatively mature, but there is still a great space for development in order to truly realize the fine management of specialty and specific diseases and form its own unique advantages. At the same time, scientific research is still our weakness.

Key Cooperation Aspects

Integrated Management of Gestational Diabetes Mellitus

Early screening and early detection of diseases related to perinatal nutrition and metabolism; To carry out standardized, scientific, individualized and remote management and guidance; Carry out pre-pregnancy, pregnancy and postpartum long-term monitoring and management; Form multi-dimensional and multi-level systematic management, such as: time (pre-pregnancy - pregnancy - delivery - postpartum), methods (diet - exercise - blood glucose monitoring - drug therapy), spatially (face-to-face mentoring - online remote management), patient level (population with different risk factors), and disciplines (obstetrics, endocrinology, nutrition, etc.)

Gynecology Department

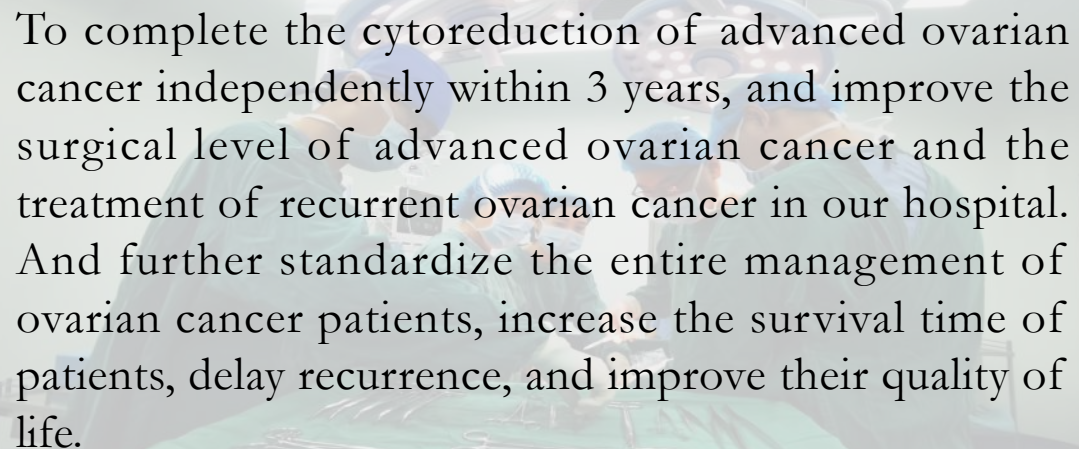

THE ADVANTAGES

Ovarian cancer is known as "the king of gynecological cancer", and the mortality rate ranks first among gynecological malignant tumors in China. The Department of Gynecology in our hospital is a four-level endoscopic technology approval unit in Shandong Province, a collaborative base for the standardized training of residents in Shandong Province, and a high-quality specialty for comprehensive treatment of gynecological tumors in the city with a high-quality, skilled medical team. Our hospital carries out laparoscopic ovarian cancer staging surgery. The patients undergoing ovarian cancer surgery in our hospital are mainly early-stage cancers. Every year, more than 3000 cases of minimally invasive surgery are completed, of which more than 500 cases of difficult and critical IV-level surgery. The surgical location and scope of ovarian cancer cytoreduction surgery and whether R0 can be achieved (that is, complete tumor resection with no visible residue) are of great significance.

Key Cooperation Aspects:

Achieve R0 for surgery and treatment after multiple reviews

To complete the cytoreduction of advanced ovarian cancer independently within 3 years, and improve the surgical level of advanced ovarian cancer and the treatment of recurrent ovarian cancer in our hospital. And further standardize the entire management of ovarian cancer patients, increase the survival time of patients, delay recurrence, and improve their quality of life.

Pediatrics Department

THE ADVANTAGES

Pediatrics department of our hospital is the first department to carry out standardized diagnosis and treatment of asthma in the city, and also the first to apply The Global Initiative for Asthma (GINA) Program to carry out atomization inhalation therapy and standardized management of childhood asthma in Zibo. More than 200 asthmatic children are standardly managed every year. A special asthma clinic is set up to formulate an individualized program for a child with asthma and give guidance and help to the parents of children with asthma. Pediatrics in our hospital not only has the most advanced pulmonary function instrument, but also has the excellent medical team. Many medical staff have gone to domestic first-class hospitals such as Beijing Children's Hospital for further study. There are more than 170,000 outpatient visits and 8,000 in-patients visits annually, and more than 700 critically ill children were treated every year.

Key Cooperation Aspects

Contact: Tan Yuxia +86-15953332256

E-mail: tanyx2009@126.com

Standardized diagnosis, treatment and management of Asthma

To establish a standardized allergen detection and desensitization allergy treatment center. The number of patients under standardized management increases by more than 10% over the previous year. To apply for scientific research and project approval, and publish 1-2 academic papers a year. It will be conducive to further standardize the diagnosis and treatment of children with allergic diseases and better serve children.

Neonatology Department

THE ADVANTAGES

The Department of Neonatology is a key discipline in Zibo, a transfer center for critical newborns in Zibo. Since its establishment in 1992, it has developed into the largest and most well-equipped Neonatal Treatment Center in the whole city, which is responsible for the diagnosis and treatment of various neonatal diseases and the consultation, transportation, monitoring and rescue of critical premature infants in the central area of Shandong Province. At the same time, we undertake the city's neonatal professional business guidance and Neonatal Recovery Training. Since the establishment of the center, more than 30,000 critically ill newborns have been treated. In the past 5 years, more than 60 cases of ultra-premature infants under 28 weeks have been treated. The minimum weight of the preterm infants who survived was only 680g, a new record for the most successful treatment in Zibo Low birth weight. The survival rate of very preterm infants has been significantly improved. After years of further study, our department has reached the domestic advanced level in the diagnosis and treatment of the disease.

Contact: Li Binghui +86-13853313197, **Email:** binghuilowell@outlook.com

Prevention of Pulmonary dysplasia and treatment of chronic lung disease in extremely premature infants

The project can be carried out online, offline, long-term training and short-term communication. Learning from foreign advanced treatment methods to break through the treatment bottleneck and reduce the incidence rate of bronchopulmonary dysplasia and the mortality of preterm infants. It is expected that the survival rate of ultra preterm infants without serious complications can be increased to 90% .

Key

Cooperation

Aspects

Ultrasound Department

THE ADVANTAGES

The ultrasound department of Zibo maternal and child health care hospital is the only unit with prenatal ultrasound diagnosis qualification in Zibo. Since our hospital took the lead in carrying out prenatal examination in Shandong Province in 2004, the department has been responsible for the consultation and recovery evaluation of abnormal fetuses in the central areas of Shandong. The total number of abnormal fetuses screened in 2021 reached 1415. The professional levels of NT screening in early pregnancy, systematic ultrasound screening (four-dimensional ultrasound), fetal heart ultrasound and fetal ultrasound soft index screening carried out by prenatal ultrasound in our hospital are at the leading level in the province. More than 1500 cases of extracorporeal fetal inversion under ultrasonic monitoring have been completed, which is at the leading level in China. The professional and technical levels of prenatal ultrasound monitoring and female postpartum pelvic floor ultrasound evaluation are at the forefront in China.

Key Cooperation Aspects:

Prenatal ultrasound diagnosis and postpartum pelvic floor ultrasound integrated management

To understand the current situation of medical development of foreign prenatal ultrasound diagnosis, pelvic floor ultrasound and intrapartum ultrasound through international exchanges and cooperation. To learn their advanced technology and management concept, establish a series of diagnosis and treatment norms and diagnostic standards, improve the diagnosis level and scientific research level of our hospital and Zibo, and make the diagnosis level and scientific research level of Obstetrics and Gynecology ultrasound in our hospital quickly in line with international standards and reach the domestic leading level.

Medical Cosmetology Department

THE ADVANTAGES

Medical Cosmetology Department was founded in 1994, which is in line with the national standard of formal medical cosmetology institutions. With advanced photoelectric equipment, skilled and experienced team of experts, we use the international cutting-edge concept and technology to develop a personalized cosmetic program for each beauty personage. The department mainly carries out plastic surgery cosmetology, micro-plastic injection cosmetology, laser cosmetology, liposuction plastic and fat filling, private plastic and other key projects, which have a large demand. Microneedle hair transplantation has been carried out in our hospital.

Key Cooperation

Aspects: Microneedle hair transplantation

To conduct academic exchanges and practical technical guidance for key projects such as hairline reshaping, eyebrow reshaping, eyelash encryption, and beard reshaping. To carry out remote consultation of difficult cases and special cases through online guidance. After the epidemic situation stabilized, we'd like to invite Korean experts to the hospital for regular on-site guidance, on-site surgery, or short-term guidance. Fully learn from the advantages of Advanced plastic surgery in South Korea to promote the diversified development of plastic surgery industry in our hospital.
